2017 NDCC Membership Calls

[2017 Now Available!](#)

Next call: Monday, May 15, 2017 ANNUAL BUSINESS MEETING via
teleconference AND webex for voting

April is Oral Cancer Awareness Month!

The NDCC HPV Taskforce developed a media toolkit for Oral Cancer Awareness. Our partners at the North Dakota Dental Association are sharing this toolkit with their 400+ dental health professional members. We would like to be sure to extend the use of it to our coalition partners as well.

The North Dakota Cancer Coalition (NDCC) considers oral cancer prevention a priority, as with prevention of all HPV associated cancers. This year, we are pleased to be able to provide a social media toolkit for Oral Cancer Awareness Month. Please consider using these posts to share information about oral cancers and HPV associated oropharyngeal cancer. The toolkit includes actual posts and graphics/infographs that are designed for Facebook and Twitter. The images also standalone without additional explanation and in the past with other toolkits, providers were encouraged to save the photos to a folder on the patient room computers and set them as a sliding screensaver or to use on still screens in patient waiting areas! Please share it with your social media and practice media coordinators. You can download a copy of the toolkit [HERE](#)

Cancer and Surveillance Branch Releases United States Cancer Statistics: Data Visualization

The new application, United States Cancer Statistics: Data Visualizations, is a user-friendly product that allows cancer surveillance data to be directly and more easily accessible by public and cancer control planners.

The United States Cancer Statistics (USCS) Data Visualization tool displays a subset of cancer incidence and mortality data from United States Cancer Statistics (USCS) web-based report. It includes six webpages: Overview; U.S. Cancer Demographics; Cancer Trends; State Cancer Overview; State Data and Ranking; followed by technical notes and additional resources.

The tool creates data visualizations to describe US. Cancer burden, incidence and mortality over time, and state-specific data in comparison to national rates.

Data are displayed as maps and bar charts with interpretive text when users scroll over each graphic. Users can customize displays of overall and cancer-specific statistics, view data as a table, and share each page via social media.

To access the application, go to: <https://nccd.cdc.gov/USCSDataViz/>

Training Opportunities!

Teach-Back is an evidence-based communication method shown to improve patient's understanding of information, raise patient satisfaction, help patient's feel more relaxed and build trust between patient and clinician. Teach-Back can be **used in all healthcare settings to promote patient/family engagement**. The QHA Care Coordination team has compiled tools and resources to help facilities/organizations implement teach-back. The **April 26 webinar** will review these resources and discuss effective implementation strategies.

Check out the tools and implementation resources on the GP QIN

Behavioral Health Tobacco Conference May 8, 2017, 8am-4pm at the Radisson Hotel in Bismarck, ND.

Target Audience: registered nurses, licensed practical nurses, advanced practice nurses, respiratory therapists and other healthcare professionals.

Learning Outcomes:

1. Name regulatory requirements for tobacco-related documentation and common standardized outcome measures.
2. Demonstrate understanding about the unique challenges tobacco present for the people with whom the learner works with.
3. Discuss various forms of tobacco use, health consequences associated with tobacco use and options for cessation treatments.
4. Utilize training and skills to implement an evidence-based tobacco cessation program.
5. Demonstrate ways to enhance behavior change by using the motivational interviewing approach.

Registration Information and Fees:

Cost: \$30.00 for Sanford Employees and Community Healthcare Professionals
