

- ◆ The Pap test (or Pap smear) checks the cells of the cervix (the opening of the uterus) for changes that can lead to cervical cancer.
- ◆ A pap test can find abnormal cells that can be treated before the cells turn into cancer.
- ◆ Women should begin Pap tests at age 21.
- ◆ Pap tests are available through the *Women's Way* program for eligible women ages 40 through 64. Visit www.ndhealth.gov/womensway.
- ◆ For Pap tests provided on a sliding fee scale according to your income, visit www.ndhealth.gov/family-planning.
